

TUTORIAL

Initialize the `/dashboard` command

- 1 Open Telegram
- 2 Search for the user `@vulkania_bot`* *and add it to your group*
** Make sure you only add the bot with the username @vulkania_bot, others are imposters!*
- 3 Go to your Group and make `@vulkania_bot` admin of the group. Grant it all admin rights as shown
- 4 Configure the bot by adding this message on your group:
`/set TICKER`
Replace `TICKER` by your token ticker. Ex: `/set VLK`
- 5 That's it!
Now anyone can call up your Vulkania dashboard using `/dashboard` in that channel
